

# KLESSE COLLEGE EXPERIENCES

# INTERNSHIPS

“ This summer I interned at Samsung Austin Semiconductor as an Ion Implantation Process Intern. Over the course of the 11 weeks, I was able to learn a wealth about semiconductor manufacturing process and loved how hands-on the position was. I was also very grateful to be selected to participate in Samsung's first ever Global Star Program. A few individuals and I had the opportunity to travel to headquarters in Korea where we experienced facility tours, workshops, and cultural immersion to learn about Samsung's roots and values. I was beyond happy to be able to use my skills from my classes and represent UTSA in this awesome experience! ”
